Subject: colour + nice fonts

Posted by Margrethe on Mon, 09 May 2005 14:29:59 GMT

hello!

I'm trying to create a nice-looking colour plot as jpg for my
presentation.
Following various advice, I first make the plot twice as big as I want
it and thereafter use tvrd and tvimage to display it half the original
size so that the plotting symbols, numbers and characters appear nice
and smooth. But the color information is lost! Any idea how I can
solve this?
Help is very much appreciated!

```
set_plot,'x'
window,xsize=1200,ysize=1200
!p.font=1
device,set_font='Helvetica',/TT_font

[plotting...]

im=tvrd( )
window,1,xsize=600,ysize=600
tvimage,rebin(im,600,600)   <---- greyscale :-(
```
