Hi,

is there a way to create a widget_draw that initialy hasn't set the SCROLL and X_SCROLL_SIZE/Y_SCROLL_SIZE keywords and later I can modify it to has it?

If I create a widget_draw without scrolling, then later when i changhe its DRAW_XSIZE all the widget grows.

If I create a widget with scrolling then later when change the size with DRAW_XSIZE the result is ok but two spaces (left and bottom) are reserved for the future scrollbars and this is a bit ugly.

Summarizing, I need (if possible) a way to create a scrollable widget_draw that initiale dont show this two reserved zones for scrollbars.

Thanks IDLers.
