
Subject: Using write_csv_data

Hello again...

I'm using write_csv_data to export an array to a CSV file. However, when I open the file in Excel, the records are all together in only one cell. For example, the A1 cell shows:

0.626617, 0.413875, 0.501096, 0.242794, 0.468694

However, A1 should show only 0.626617

How can I fix it?

Comments welcome,

regards,

Julio
