Subject: Procedure names must be lowercase on Linux for auto-compile?

I was running into problems with auto-compilation of procedures and
narrowed down the source of the problem to the filename/procedure name.
I have two functions that are identical except for the filename and
procedure name (one is isScalar, the other is is_scalar). The filenames
match the function name and both files are located in the same
directory, but only is_scalar will auto-compile when referenced.

Am I correct in my diagnosis of the problem? Is this documented
anywhere? Does this have something to do with the fact that I'm running
on Linux (MAC OS X)?

Thanks,
Doug
