Hi idl-group,

finally I (think) have finished the first version of IDLCanvas. I don't know what you need it, but well, here it is. For me is useful for drawing some kind of graphs, maybe you can find another utility.

All documentation and source code is on my web page :). These are the urls associated:

<http://www.grahi.upc.edu/santiago/?p=132> (IDLCanvas)

<http://www.grahi.upc.edu/santiago/?p=127> (EventAction)

Remember for work with IDLCanvas you need the EventAction class (in the second url).

I hope somebody test it (it comes with the examples in the "sample" subdirectory) and, maybe, spend some time to create some new applications.

I'm continuing working on some examples more to show more possibilities.

Thanks,
Antonio.
