
Subject: idl hyperhelp on DEC ultrix system

I'm having difficulty getting the idl v4 on-line help working on a DECstation 5000/200 system running Ultrix v4.4. It gives a "Segmentation fault" when run with the idlhelp command and returns nothing when run with the "?" from within idl. On a DEC Alpha machine, the on-line help facility works as expected. Is anyone else experiencing problems with this facility on a DEC ultrix system?
