
Subject: IBETA error message when using TM_TEST function

Hi,

When I use the TM_TEST function, I sometimes get an error message that reads:

"IBETA: X must be in the interval(0,1)"

I usually have no problem with the TM_TEST function, expecially when using regularly gridded data. However, the problem has come up, in this case, while using observational (climate) data that have some missing values ("-999").
