Hi,
I have used the AVI dlm, dll and have successfully used it with the
virtual machine.
I can post (or email) the sav file if anyone wants to check it out.
It is an embarrasingly simple gui that reads in jpgs or pngs, and creates an
avi.

Cheers,
bob

PS is there an execute function somewhere hidden in one of
your called files? I use the dlm with
"BUILD_DATE MARCH 2002"
and I think I am using the latest (aviIDL56.zip).
Also, what version of the VM do you have?
