Hi group.

I have a XML file (all files are attached) and want to parse with IDLffXMLDOMDocument object.

The Load documentation method says I can specify VALIDATION_MODE (to ensure my XML accomplishes the appropiate DTD or Schema) and EXCLUDE_IGNORABLE_WHITESPACES (to exclude ignorable whitespaces :)).

Well, If a set up my XML to use DTD (and put VALIDATION_MODE=2, that is validate always) all is right. Also the whitespaces out of elements are ignored. But when I use Schema file in the XML i get some errors (the 'plugin' elements is not defined and the whitesapces are nor removed).

Can anybody help me? I tested my XSD+XML file with "<http://apps.gotdotnet.com/xmltools/xsdvalidator/Default.aspx>" and all is ok.

Is there any problem with IDL and XML Schemas ??
