Hi Jeff,

I tried georeferencing the original AVHRR file first using the
'envi_avhrr_geometry_doit' function. The problem is that the processed
file is of type ENVI. (I wrote a small program to test the type of the
output file). So I assume that the 'envi_avhrr_geometry_doit' function
changes the file (from AVHRR to ENVI) after processing by default.
Maybe there is a way to circumvent this problem but I don't know enough
to make that call. The 'envi_avhrr_calibrate_doit' function specifially
requires an input file of type AVHRR - so it doesn't process the
georeferenced file. In short, I'm back to square one.

Any suggestions or help would be much appreciated.

Thanks,

Vinit

P.S: I'm a programmer - so I don't know anything about AVHRR processing
too! :-)
