Hi Craig

I know your question has been answered elsewhere, but I'd just like to make a couple of comments on the original post.

- > ...This might be because I'm using
- > the IDLDE, so the routine isn't actually on the search path !PATH, even
- > though it has been compiled OK when building the project.

This is a bit of a non-sequitur. How does using IDLDE relate to whether the file containing the routine is on the !PATH.

My advice: put files containing IDL routines on !PATH.

- > Once this problem is solved, I'll also need to determine the filename
- > for the source file containing a definition of 'fred', because most of
- > the routines in this project don't have their own 'fred.pro' source
- > file.

My second piece of advice: give each routine its own source file.
