Here are the steps that I would use:

1. Define a color bar with blue colors in the indices 0-127, where 0 is dark blue and 127 is white. Then you put the red colors in indices 127-255, where 127 is white and 255 is the dark red.
2. Then use bytscl to scale your range: `xbyte=bytscl(x,min=-300,max=300)`
3. Use TV to display the array.
