
Subject: IDL Documentation tool

Hello,

I have just started with IDL. And the first task I am trying to do is improve some already existing testing software(*) to work with IDL.

One of the very first thing I want to do is generate documentation from an IDL code. Usually I would just go to doxygen, but unfortunately -IMHO- IDL is not one of the supported language.

I was searching on the net and the only thread I found was this one:

<http://groups-beta.google.com/group/comp.lang.idl-pvwave/msg/ffeef7e9e8a1cd35>

Does anyone know what happen to this code from Michael Plugge ?

Thanks
Mathieu
