Subject: Displaying 2D arrays

Hello,

I have a 2D array filled with 0's and 1's. How do i display it so that there is simply a dot for each 1? It should look exactly like an 'image' of a 2D array, but also should have axes and gridlines. Is that possible?

I tried image_cont, but then I don't know how to get rid of the contour...

Thanks a lot!
