I've just installed IDL6.2 on MAC OSX 10.4. When I try to run the demo, I get the following error message:

IDL Version 6.2, Mac OS X (darwin ppc m32). (c) 2005, Research Systems, Inc.

IDL> demo

% Attempt to call undefined procedure/function: 'DEMOOBJ__DEFINE'.

% Error occurred at: DEMO 581

 /usr/local/rsi/idl_6.2/examples/demo/demosrc/demo.pro

% \$MAIN\$

% Execution halted at: \$MAIN\$

Any suggestions?

Thanks,

Dick French
