Subject: Re: Como unir la interfaz garfica con los procedimientos
Posted by Rick Towler on Thu, 11 Aug 2005 17:02:50 GMT

hola Anto,

"Building IDL Applications" is part of the documentation provided with
IDL. It can be found in your IDL install directory (On windows that is
usually C:\Program Files\RSI\IDL61\help\building.pdf) It can also be
accessed thru the online help system (select Help->Contents on windows
or type "?" on the idl command line.)

WIDGET_CONTROL is a procedure that controls the display and behavior of
GUI objects. In IDL, GUI's are created from a collection of "widgets"
(buttons, lists, text boxes...) so to build a GUI you need to read up on
widgets. The online help supplied with IDL is a great place to start,
assuming that RSI provides the documentation translated into Spanish. :)
