Anto,
the example below is from the "Building IDL Applications" guide and should
give you a basic idea. You can then search the help for all WIDGET_*
commands for other GUI objects.

Haje

```
PRO widget2_event, ev
  WIDGET_CONTROL, ev.TOP, GET_UVALUE=textwid
  WIDGET_CONTROL, ev.ID, GET_UVALUE=uval
  CASE uval OF
    'ONE' : WIDGET_CONTROL, textwid, SET_VALUE='Button 1 Pressed'
    'TWO' : WIDGET_CONTROL, textwid, SET_VALUE='Button 2 Pressed'
    'DONE': WIDGET_CONTROL, ev.TOP, /DESTROY
  ENDCASE
END
```

```
PRO widget2
  base = WIDGET_BASE(/COLUMN)
  button1 = WIDGET_BUTTON(base, VALUE='One', UVALUE='ONE')
  button2 = WIDGET_BUTTON(base, VALUE='Two', UVALUE='TWO')
  text = WIDGET_TEXT(base, XSIZE=20)
  button3 = WIDGET_BUTTON(base, value='Done', UVALUE='DONE')
  WIDGET_CONTROL, base, SET_UVALUE=text
  WIDGET_CONTROL, base, /REALIZE
  XMANAGER, 'widget2', base
END
```

HELLO

I START WITH THE LANGUAGE AND NEED HELP WITH simples examples to start
programming whit GUI.

Since I speack spanish and it's difficult to me english and the
translations not exccactly. (I'm a girl).

THANKS ANTO
