I'm not sure if you've had any more helpful replies, but one way you could get the tables is to write the information into a standardised TeX output (or LaTeX), and then just TeX, dvi and print the postscript output using a spawned batch command. This gives quite great quality output, but just takes some time to set up initially.

Tim

P.S. I'd like to hear if anybody else has a better method of producing tabulated data results :)
