Hi All,

I want to execute SQL query on IDL virtual machine (On other machine where IDL is not loaded only IDL virtual machine are loaded where license of IDL DataMiner is not available). I do not have license of IDL DataMiner on my IDL virtual machine. Without using IDL DataMiner how can I run SQL query on IDL virtual Machine.

I am loading my data on table, now I fire simple query on that data. Is there any other way to run query without using DataMiner on virtual machine?

Regards
