Fine, so that's settled :-)

Well, in this case I am a bit stuck, as you can't read in all the data at once in order to do some fancy things with histogram. So I guess you are right, clever reading from disk is necessary, and I doubt it's something you can easily solve with IDL. Well, I'll think over it over the week-end (starting today :-)) and will hope that someone else comes with a good solution ...

Best regards,

Peter
