
Subject: Postscript colour sampler?

Dear All,

I'm making quite a few plots with various different coloured lines. In the past I've always just used TVLCT to define my colours as and when I need them but I'm being dragged, kicking and screaming, into using colour tables. What I would like to do though is produce a colour sampler sheet on PS output for whichever colour table I happen to be using.

I'm pretty sure this will be easy to do with a big grid of polyfill's, but I thought I would just do a quick check to see if anyone has already done it, thus saving me half an hour? I'm after nothing more complex than colour + number on a PS page.

Thanks,

Ben
