I'm not sure about this one. If REVERSIBLE is set to true I wouldn't expect this to happen. Are you using IDL 6.1 or 6.2? I know that in 6.2 the version of Kakadu has been upgraded (Kakadu is the underlying JPEG2000 library that IDL uses). If you're using 6.1, you might try downloading an evaluation version of 6.2 to see if the same thing happens.
