Chintan,

The default when writing JPEG2000 is lossy compression. To get lossless compression, you need to set the REVERSIBLE property to true. The best way is probably to set it when you create your JPEG2000 object. Something like this:

```
oJP2=OBJ_NEW('IDLffJPEG2000',filename,/WRITE,/REVERSIBLE)
```

adding, of course, any other properties you additionally want to set.

David
