Hi,

I got the answer on google, but for this i have to implement Gaussian Normal Distribution function in one dimension IDL..

The eqation is given in the following web site,

<http://mathworld.wolfram.com/GaussianFunction.html>

Now if you change the range of the Standard Deviation from the text box the Graph is being changed according to the eqation. Is there any direct function call in IDL for this eqation or i have to implement it ?

Again Thanks in Advance.
