Can anyone explain what I am doing wrong here?

```
IDL> print, FILE_DIRNAME(['top', 'middle'], /MARK)
```

```
././
```

```
IDL> print, FILE_DIRNAME('/top/middle/', /MARK)
```

```
/top/
```

IDL Version 6.2, Mac OS X (darwin ppc m32). (c) 2005, Research Systems, Inc.

Thanks, Ken Bowman
