
Subject: number format in structure

Hi All,

does anyone happen to know how I can specify the format to which numbers stored in structure tags should adhere?

for example, I'd like to (hypothetically) be able to do

s={a:3.2f,b=2.3f}

s.a=123.12345678

will yield

print,s.a
123.12

Any ideas?

Thanks,
KL
