You might want to take a look at this thread:

http://groups.google.com/group/comp.lang.idl-pvwave/browse_thread/thread/4b90c8f4a2c7b715/6e29cac0ee6fe976?q=apply+shapefile&rnum=1#6e29cac0ee6fe976

If the link doesn't work, the name of the thread is "Apply a shapefile to raster images in IDL," so you can try searching for that.

This might not do exactly what you want, but it should be a good starting point. Unfortunately, one of the submitters made the comment that there appears to be no way to programmatically convert shapefiles to EVF files, however. Anyway, hope this helps.
