Dear All,

I am trying to call the some IDL routines from C, but any how i do not get sucess.

I am using red hat Linux 9.0 , and my IDL version is 6.1. I am trying to run the example calltest.c program that is given in IDL_6.1/external/callable/calltest.c.

Can any body tell me the exact steps for runing this program on RedHat Linux.

With Regards

Prahlad Sarma.
