Hello people,

I have meteorological data from several years, like these:

Date	Temp (max)	Temp (min)
01/08/2001	27.2	12.7
02/08/2001	27.8	12.4
03/08/2001	26.8	16.3
04/08/2001	26.6	12
05/08/2001	27.4	11
06/08/2001	27.6	16.1
07/08/2001	27.6	11.2
08/08/2001	28.4	13.4
09/08/2001	27.2	10.9
10/08/2001	26	9.7

I want to calculate mean value from 01-05 days, 05-10 days, 10-15 days
and so on.
In other words, I must get the mean value at each five days.
I'm trying to make some code to get it automatically. I think this kind
of work is trivial for meteorological data users. Does anybody have
some idea?

Regards,
Júlio
