Dave,

That's an interesting trick, but not what I'm after right now. I don't need to transform the sampled points into an image, I simply need to display them on top of the image so that I can see where they fall. So my problem is more about trying to pass these XY points into an image handler (iimage, IMap, or really I could use ENVI too). This should be easy, but for the life of me I can't figure it out.
