Humm. I don't see any axes in that plot. Just lines. Maybe
what you are looking for is PLOTS, not AXIS.

I'm just leaving my office (for about 5 weeks), so I probably
can't help much. If I wanted a single x-axis for three plots,
I would draw the first plot with XSTYLE=8, the second and
third plot with XSTYLE=4, and then put the final axis on
top with AXIS, XAXIS=1 after I drew the 3rd plot.

The Y axis is more problematical, but I illustrate one way
to handle it in the article I had you read.

Vertical lines can be drawn anywhere and anytime with PLOTS.

Cheers,

David
