Hello,

Sorry, I am reposting this message again because the previous one contained many errors in the header...

I have a vector A (integers):

> A = [1,2,3,4]
that I want to convert into a string.

If I use the commandB = string(A)then B is a string of four elements.

How can I convert A to string in order to have '1234' ? which is not an array of four elements...

Well at the end, I want to convert '1234' into the number 1234.

Thank you,

Franois Leduc
