Hi

I am running following program. Here i have created one table wavetab in oracle database which has two fields 1) wavedata 2) id . Here Wavedata is in blob and id as an integer.

pro inputwave

```
; Read the Data
data = read_wav('C:\sound1.wav')
;Open Connection Record and Database Record
conn = obj_new('IDLdbDatabase')
staus = DIALOG_DBCONNECT(conn , DATASOURCE='WaveFile')
orec = obj_new('IDLdbRecordSet',conn, TABLE = 'wavetab')
;Add Record
id = 1
orec->AddRecord,[data,id],SET_AUTOINCREMENT=1
; Delete the Record Object
obj_destroy,orec
obj_destroy,conn
```

end

After running this program when i am running query select count(*) from wavetab on the sql prompt gives me 0 Row Selected. So This program is not inserting the data. I will be thankful if any one can help me in this problem
