Subject: Vector Plot Legend Posted by steven.leopardi on Sun, 23 Oct 2005 02:10:27 GMT View Forum Message <> Reply to Message

Hi all

I am overplotting wind vectors on a map projection using partvelvec.pro but i was wondering if anyone has been able to place a 'legend' on the map as well? i.e. a vector length of the given size corresponds to a certain speed. I think i can fake one up just using xyouts and some 'fake vectors' but I'm hoping for a better solution?

Thanks RPF
