Hi

Thanks those that helped with the question on plotting and colors...i
have another question on plotting which i would be grateful for help
with...

i have plotted a graph, with a number of variables in different colors
on the screen, with some xyouts to say which line is which. this looks
fine on the screen, but when i plot to a ps file by doing

SET_PLOT, 'PS'
DEVICE, FILENAME='myfile.ps', /LANDSCAPE
plot etc
device,/close

only the black line seems to come out and the xyouts are all printed on
top of each other...

any ideas

thanks

russ
