Thanks for your reply

As a fact ,I can see nothing whether using the user_defined or the standard symbols. And I can see the connectting lines when I set the linestyle value from 6 to 3 or 2,So It is not the coordinate 's problem.

My user-defined symbol can be seen perfectly in other PRO files such as "xplot.pro",So I missed the direction,I don't know why they can't be showed in my code.

I have fulfilled the most function in C# plus axIDLWidgetControl 3.0,including drawing cities using color dot, And there is no problem when I finished such above problem.BUT THAT IS DEVELOPED IN DIRECT DRAWING MODEL,And now,I must translate them from direct drawing model to Object drawing model,then these problem happened!

Could you please give me you advice

Thanks a lot
