Hi,

I have inherited an old IDL save file from which I would like to get
some data.

I have tried to extract this information with the RESTORE command, but
get the following error messages:

IDL> restore, 'mydata.iss'
% RESTORE: Obsolete SAVE/RESTORE file: . Use OLD_RESTORE.
% Execution halted at $MAIN$ (RESTORE).

IDL> old_restore, 'mydata.iss'
% Attempt to call undefined procedure/function: 'OLD_RESTORE'.
% Execution halted at $MAIN$.

Does anybody have any idea what OLD_RESTORE is, or what I am doing
wrong?

I'm using IDL 3.5.1 (vms alpha) but have also tried on a Sparc with
SunOS4.1.3_U1 and IDL 3.6.1a with similiar results.

Thanks,

Ken
