Hi, I am trying to call a function with a defined keyword:

d_vectrack, state, /redraw

d_vectrack is a function and redraw is a keyword such that when redraw keyword is used over /initialized, then the d_vectrack function will perform something other than reinitializing everything. but IDL compiler returns me an error

"% Keyword REDRAW not allowed in call to: D_VECTRACK"

does anyone know why?

thanks.
