Subject: Keyword\_Set function

Hi, I am trying to call a function with a defined keyword:

d\_vectrack, state, /redraw

d\_vectrack is a function and redraw is a keyword such that when redraw keyword is used over /initilized, then the d\_vectrack function will perform something other than reinitilizing everything. but IDL compiler returns me an error

"% Keyword REDRAW not allowed in call to: D\_VECTRACK"

does anyone know why?

thanks.
