
Subject: IDLgrWindow Setting - Why render image gets erased?

Hi all,

After swimming through IDL Documentation and messg boards, I couldn't find an answer to the following (and I'm surprized this hasn't been discussed .. or maybe I couldn't find it - it looks fundamental)

When you render an image in IDLgrWindow object, then if you try to maximize the window/resize (interactively with mouse clicks), the image disappears.

Thanks in advance

- Victor

P.S. Setting RETAIN = 2 helps with leaving the image rendered if you switch between windows, however, doesn't solve the above problem.
