Sorry for the multiple posts (my news reader's screwed up)

Replace the lines with:

```
ia=indgen(nx,ny) ; two dimensions.  
ja = ia/nx ; rows are numbered  
ia = ia mod nx ; column numbers  
linarr = north_bound + (ja * line_res)  
pixarr= west_bound+(ia * elem_res)
```

I've done this kind of thing many times. I pretty sure this preserves the semantics of your code. But am sure its the way to do what you want to do.
