In case anyone is unaware, IDL now has a line you can put into any procedure

`COMPILE_OPT IDL2;`

which will strictly enforce the difference between `[]` and `()`.

Incidentally, there is another line,

`COMPILE_OPT LOGICAL_PREDICATE;`

which causes boolean tests to be evaluated as they are in Perl, which I find more intuitive than IDL's rules. For details, see the manpage under `COMPILE_OPT`.
