Actually for the moment I've tried only to read each sds and then to
extract the let's call 0-zplane. I did not tried for the moment start
and count which will be me reading just one plane and so I can divided
for 8 the computational time. I will try..and also I will try mpeg_put
(although I was not succesfully in creating mpeg file with IDL up to
now :-( )
thank's a lot
