Hi Nicola,

first of all we need to know whether the files are in HDF4 or HDF5, as the data structure and thus the routines for reading differ between the two. I guess you can't avoid looping over all the files, but of course you don't have to read each file completely. For HDF4 and HDF5 there are options to read only individual datasets. In theory it should also be possible to extract just the one plane, but I never did that.

Cheers,

Peter
