I'm running pv-wave 4.01 and need a procedure to plot several 2-d plots in one graph. What I'm looking for is a 3-d plot that would have, for example, time in the x-axis, energy in the z-axis, and "2d-plot #" in the y-axis. This way I can view several 2-d plots at once, without having the confusion caused by the overlay created by "oplot". I think there's a way to do this using t3d, but before I "re-invent the wheel" I thought I'd ask around for something already developed.

Thanx in advance.
