---

Still some problem hopefully you can help me.

Each of the field has dimension of the kind (64,128) or (128,256) or (256,512) or something like this. Using the suggestion that Peter gave me the image is not display in the entire window but only occupy a part of the window itself (obviously the window is larger than the image). I tried to work with position, xsize and ysize keyword of tv (or better of tvscl) but I did not manage to let the image occupy all the graphic window. Any suggestion?

thank a lot
