Hi,

Unless you really need ENVI functions that aren't implemented in IDL (and there aren't that many), or are actually using the ENVI GUI, you might want to use IDL routines, especially for simple things like solar position. For instance, the ZENSUN routine does everything ENVI_COMPUTE_SUN_ANGLES does:

<http://www.mpimet.mpg.de/en/misc/software/idl/html/src/esrg/zensun.pro>

Cheers,

Edward Hyer.
