Hi, I'm developing an Idl application that utilize an Envi function (Envi_compute_sun_angles) so I lunch envi in batch mode in this way:

```
;start ENVI batch_mode
  OpenW, batch_lun, 'batch_log_from_ENVI.txt', /Get_LUN
  ENVI, /restore_base_save_files
  ENVI_INIT, /batch_mode, batch_unit=batch_lun
  free_lun, batch_lun

;compute the elevation angle
  elev=ENVI_COMPUTE_SUN_ANGLES (Day, Month, Year, GMTtime, Lat, Lon)
```

I'm sure that when I compile the project the Envi routines are loaded, but the first time that I run the code Idl stops at the Envi function call instruction and send me this error message:

```
% XMANAGER: Caught unexpected error from client application. Message follows...
% Variable is undefined: ENVI_COMPUTE_SUN_ANGLES.
% Execution halted at: RHO_PANEL      47
C:\OO_import_v20.0mod\rho_panel.pro
%          COMPUTE_STAT2      50
C:\OO_import_v20.0mod\compute_stat2.pro
%          XMANAGER_EVLOOP_STANDARD 478
C:\RS\IDL61\lib\xmanager.pro
%          XMANAGER      708
C:\RS\IDL61\lib\xmanager.pro
%          GUI_PRO      27
C:\OO_import_v20.0mod\gui.pro
%          $MAIN$
```

After the first time that Idl stops there code runs correctly.
