---

I have an IDLgrAxis object, but now i am trying to change the scale of the axis by adding an offset. say if the original range is from 0-100 and if the offset is -20 then the new range would be -20 to 80. however, i tried many functions in IDLgrAxis object, they all change the position of the axis without changing the text on the axis. I want nothing but the label on the axis to be changed. does anyone have any idea? thank you.
