Subject: Re: Performance improvement on IDL 6.2 for Linux/MacOSX?
Posted by alban on Mon, 28 Nov 2005 08:52:12 GMT

Hi, Mark,

I do not know, probably just some prejudices. Anyway, the Wintel
computer was the same one as the Linux one -differently booted-; I
guess I had expected the same performance on the same hardware,
independently of the OS.
My "problem" is that I run heavy code on IDL and I need to keep on
working after that; that makes the use of IDL on Windows platforms
impossible. I guess that was the cause of my initial disappointment.
Regards.

Marc
